

I can understand the equals symbol.

 I can explain my reasoning using mathematical language.

 I can read the equals symbol in different number sentences and use it to help me find a missing number.

 I understand what the equals symbol represents.

 I recognise the equals symbol and know other words for it.

What does this symbol mean?

the same as

equals

balanced

In a number sentence it can look like this:

$$5 + 3 = 8$$

The numbers on one side of the equals sign is the same as the numbers on the other side.

"5 and 3 together in a group is the same as a group of 8."

Watch this video and follow along. Pause to discuss what it is showing you at any point.

\_\_\_ is the same as \_\_\_.

"1 equals 1"

Is this correct? Explain why.

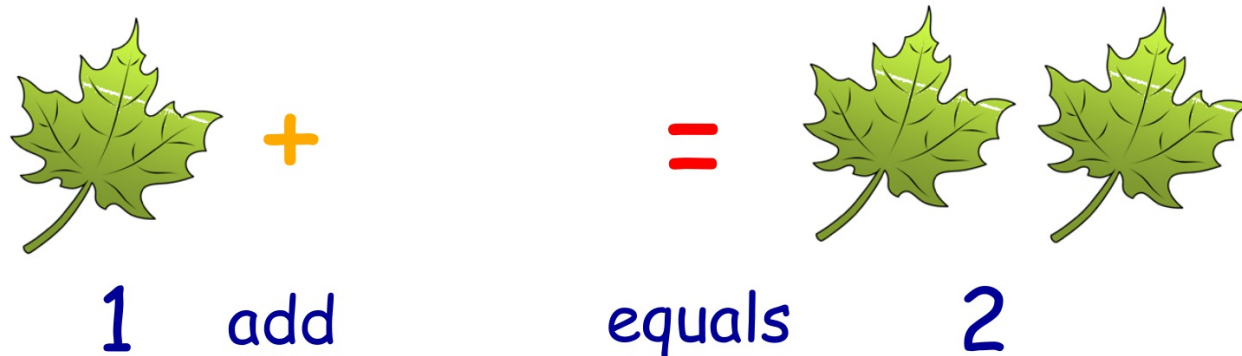

"1 equals 2"

No it doesn't!

They are not the same.

To make each side equal we have to add another number to make them the same.

$$1 + = 2$$

1 add equals 2

How would we make this equal?

Are both these sides equal?  
Fill in the missing number to  
make both sides the same.

Write the  
number  
sentence:

Let's try another one. Are both sides the same? Are they equal?

$$4 = 5$$

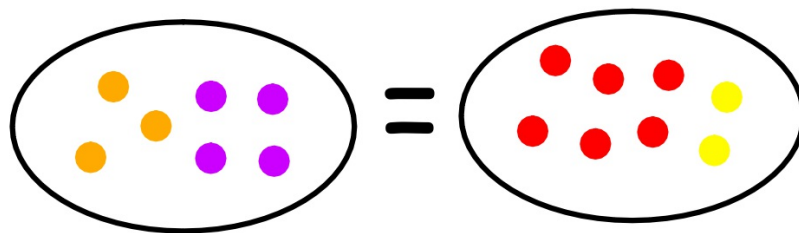

How would we make them equal?

$$4 + \underline{\quad} = 5$$

$$4 = 5 - \underline{\quad}$$

Read this aloud. Are they equal?

$$3 + 4 = 6 + 2$$

How could you make them equal?

## Your turn!

True or false?

$$5 + 3 = 8 + 1$$

$$8 = 5 + 3$$

Find out if these answers are true or false by putting a cross or tick next to each one.

$$5 + 3 = 3 + 5$$

True or false?

Challenge: Using mathematical language explain how you know.

$$4 = 4$$

$$4 = 3 + 1$$

$$2 + 2 = 4 + 1$$

Choose the correct answer here and write a sentence to explain how you know.

Which answer?

$$3 + 2 = \square + 1$$

5

6

4

"It is \_\_\_ because...."
